OVERVIEW

This report contains the approach and results of a stormwater impact analysis conducted for the proposed Scooter's Rolesville project. The project site consists of the parcel located at 306 South Main Street in Rolesville, North Carolina. The parcel is currently vacant. The stormwater study area encompasses approximately 0.70 acres.

From the NRCS Soil Survey, the near surface soils are classified as 100% Urban Land. Ground cover was assumed to be in good condition for both the pre- and post-development calculations.

The property is not within a defined floodplain area and is not identified under a special flood hazard per FEMA FIRM presented within Appendix A. Per the USGS Quadrangle Map (Appendix B) there is not a “blue line” stream present. There are no streams and wetlands onsite.

Proposed Development

This project proposes the development of a coffee shop and associated infrastructure. The proposed development increases the existing impervious coverage in the study area from 0.00 acres to 0.43 acres. Due to the increase in impervious area, detention and water quality treatment are required.

Stormwater Analysis

Stormwater management measures shall be designed in accordance with the Town of Rolesville, Wake County, and NCDEQ Stormwater Guidelines. Per the Town of Rolesville stormwater quantity requirements, the post-development stormwater runoff rate leaving the site shall not exceed pre-development conditions for the local 1-year, 24-hour storm events.

Per the Town of Rolesville stormwater quality requirements, all development projects required to manage storm water shall provide permanent on-site BMPs to lower the nitrogen export amounts. The code further states the measures shall control and treat runoff from the first inch of rain with a runoff volume drawdown time between 48 and 120 hours.

Water Quantity

A single point of analysis (POA-1) encompasses the impacted site area. The flow rate at the point of analysis was evaluated using the SCS Method. The calculations for POA-1 indicate that the post-development peak runoff rates will exceed pre-development rates for the 1-year 24-hour storm event, therefore detention is required. The time of concentration was assumed to be 5 minutes for the pre-development condition due to the small site area. Post-development areas were assumed to have a time of concentration of 5 minutes. See below for flow summary to POA-1.

Pre-Development 1 year flow- 1.27 cfs Post Development 1 year flow- 1.20 cfs

Pre-Development 10 year flow- 3.20 cfs Post Development 10 year flow- 3.78 cfs

Pre-Development 25 year flow – 4.10 cfs Post Development 25 year flow- 4.61 cfs

Pre-Development 100-year flow- 5.59 cfs Post Development 100 year flow- 5.91 cfs

Water Quality

The one (1) proposed wet detention basin will be used as a water quality BMP, treating the 1-inch storm. The proposed BMP is in accordance with the NCDEQ Design Manual. Refer to Appendix E for stormwater quality calculations.

Conclusion

The calculations indicate that the proposed development will comply with local and state stormwater requirements. To meet Town of Rolesville stormwater quantity requirements, this site will incorporate one wet pond for detention. The proposed wet pond will also be utilized as a water quality BMP. Water quality regulation measures are required based on the increase in impervious area to the proposed development.

APPENDIX A

This digital Flood Insurance Rate Map (FIRMs) is produced through a joint cooperative partnership between the State of North Carolina and the Federal Emergency Management Agency (FEMA). The State of North Carolina has invested significant resources in the development of the floodplain maps and the costs associated with flooding. This is demonstrated by the State's commitment to work with FEMA to produce and maintain the digital FIRMs for the State of North Carolina as part of the Cooperating Technical State agreement with FEMA to produce and maintain the digital FIRMs.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service

Web Soil Survey URL:

Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Wake County, North Carolina

Survey Area Data: Version 25, Oct 2, 2023

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Apr 24, 2022—May 9, 2022

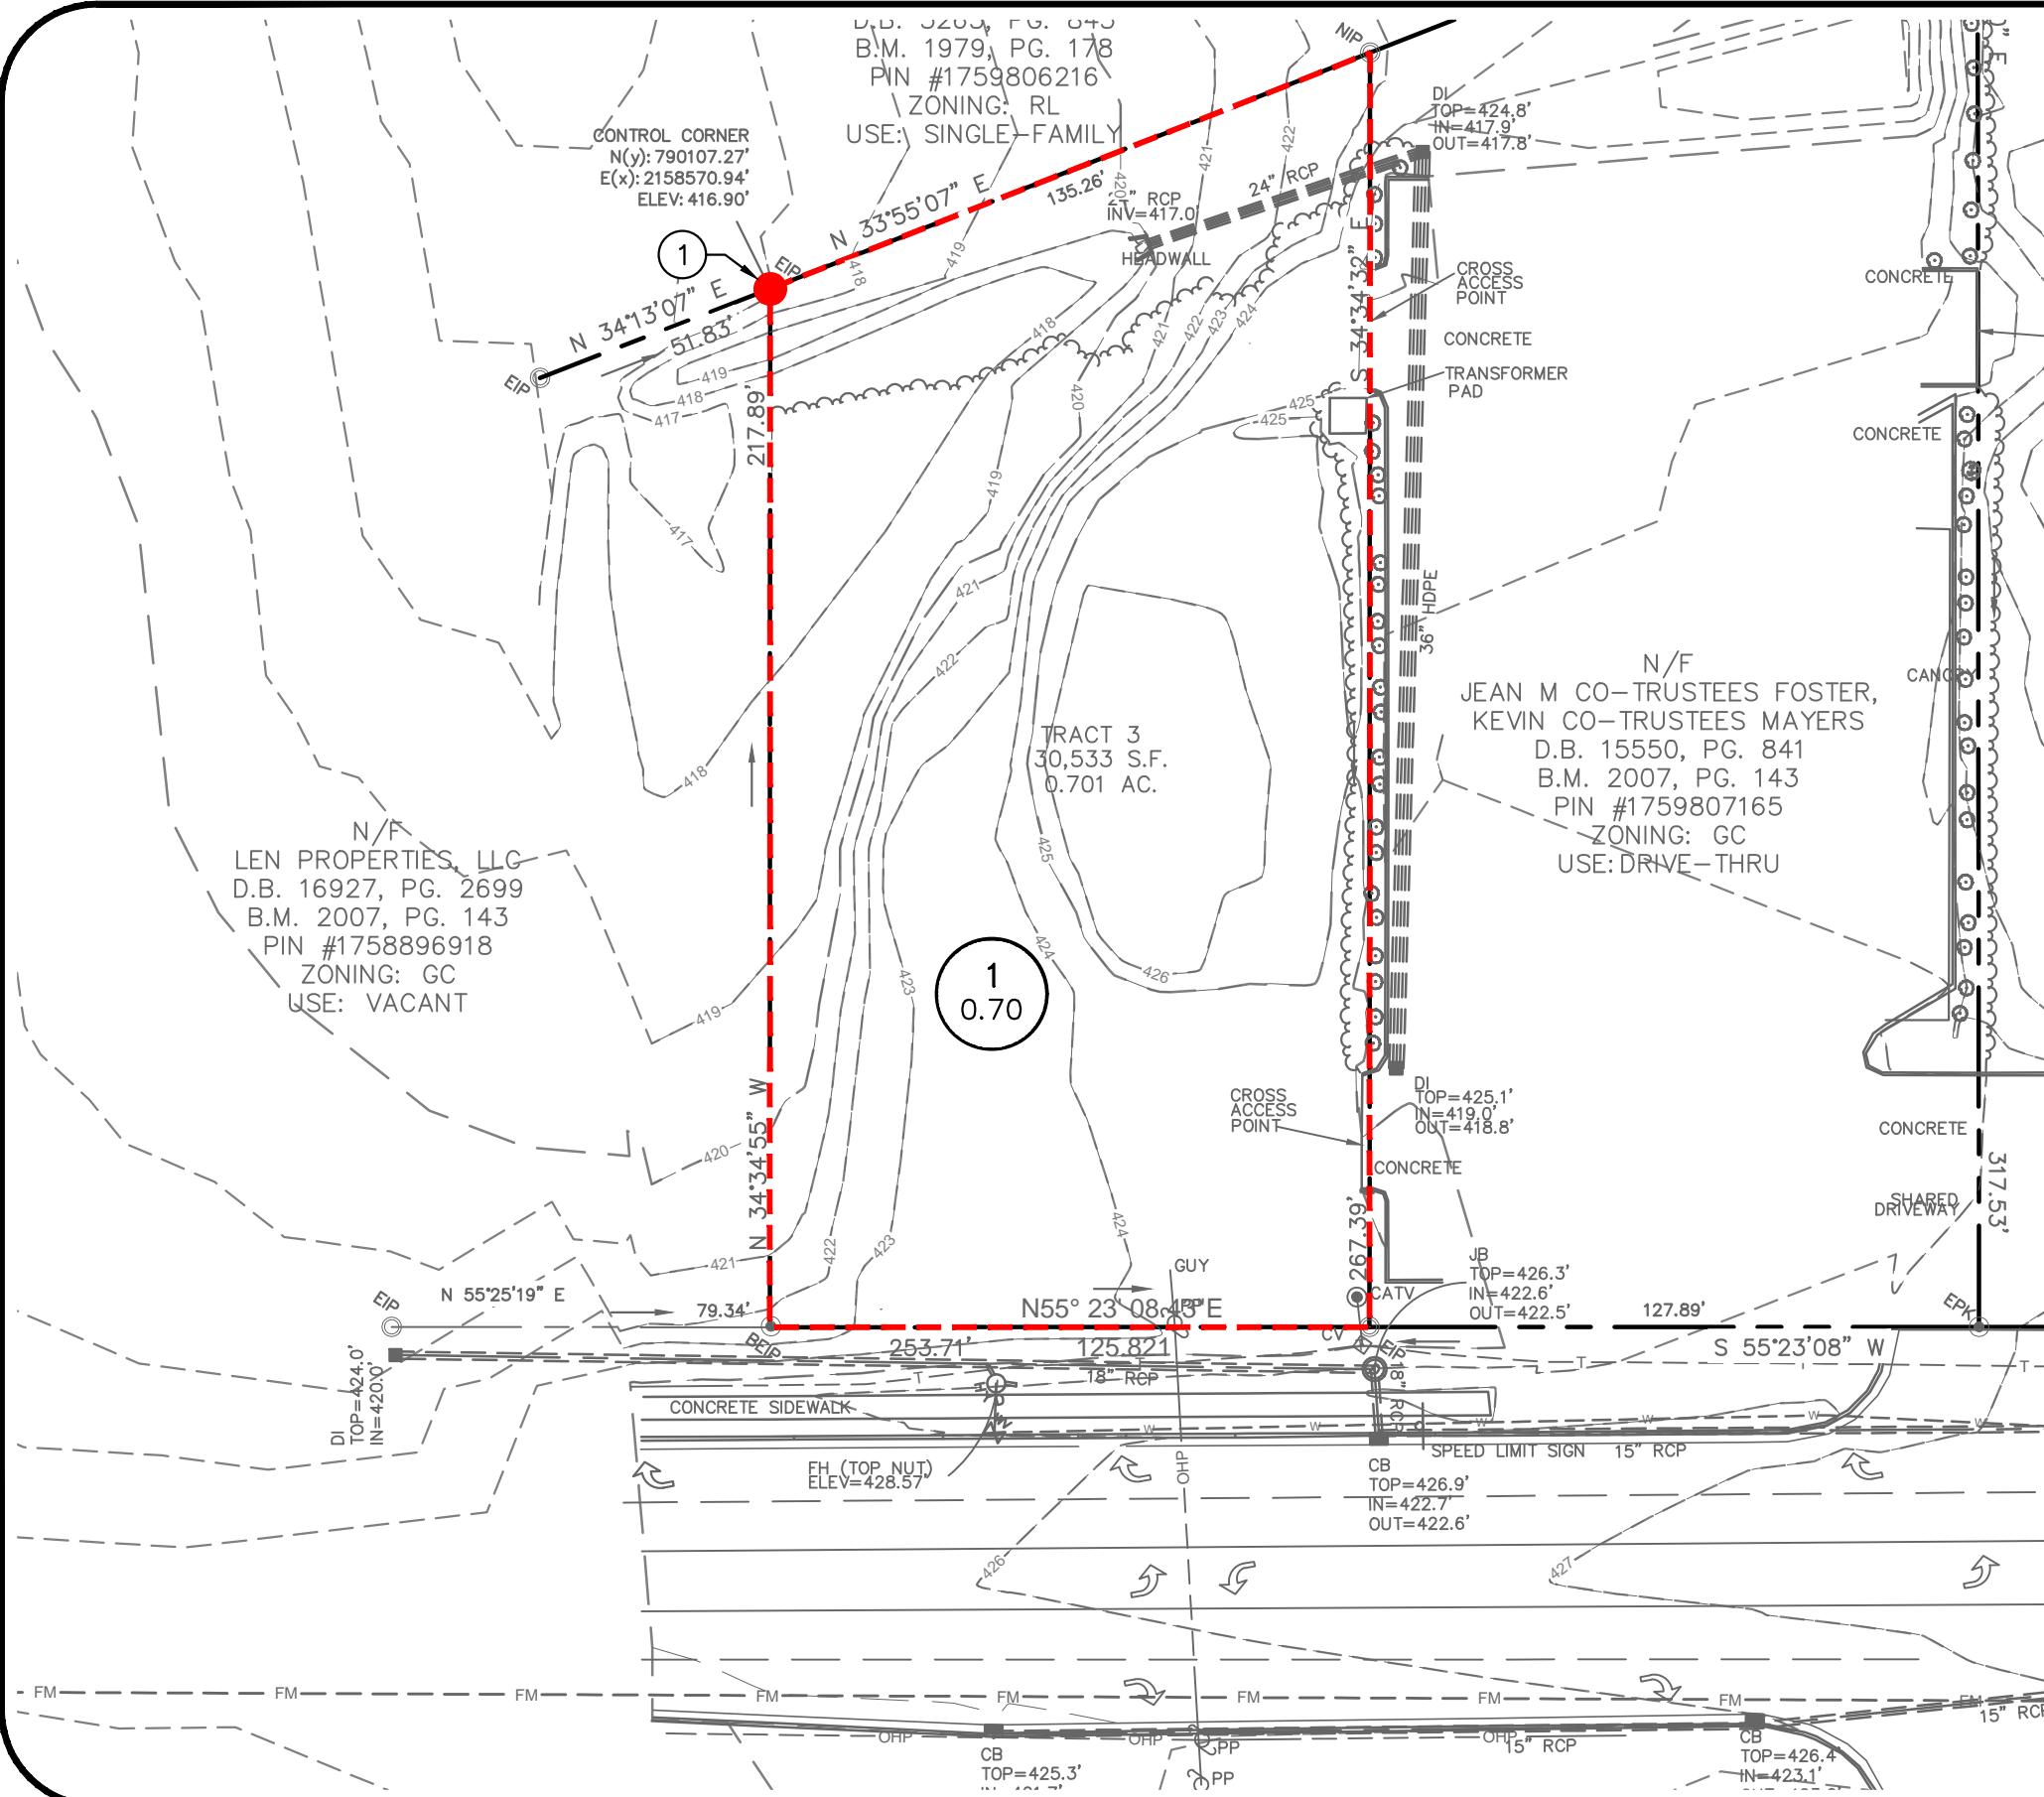

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

A graphic scale in feet, ranging from 0 to 80. The scale is marked at intervals of 20, specifically at 0, 20, 40, and 80. The segments between the marks are divided into four equal parts by internal tick marks. The first segment from 0 to the first tick mark is shaded black. The second segment from the first tick mark to the second tick mark is also shaded black. The third segment from the second tick mark to the third tick mark is white. The fourth segment from the third tick mark to 40 is black. The segments from 40 to 80 are all white.

4 LEGEND

- The diagram illustrates the components of a drainage area. It features a red dashed line labeled 'DRAINAGE AREA OUTLINE'. A black dashed line labeled 'PROPERTY LINE' runs parallel to the drainage area outline. A red dot labeled 'POINT OF ANALYSIS' is located near the drainage area outline. A circle containing the letters 'X' and 'AC' is labeled 'SUBAREA ID' and 'SUBAREA SIZE'.

Water Quality Calculations

Wet Detention Pond

Project Information

Project Name:	Scooters Rolesville		
KHA Project #:	016485000		
Designed by:	MDB	Date:	2/28/2024
Revised by:	MDB	Date:	2/29/2024
Checked by:	COB	Date:	2/29/2024

Design Resource:

NCDENR - Stormwater Best Management Practices (Revision 4-18-17)

Site Information

County:	Wake
Region:	Mtn. & Piedmont
Sub Area Location:	Drainage Area to Pond
Drainage Area (DA) =	0.58 Acres
Impervious Area (IA) with FS =	0.41 Acres
Percent Impervious (I) =	70.69 %

Main Pool Average Depth (d_{av}):

d_{av} Option 1 (when shelf is not submerged) = 0.92 ft

d_{av} Option 2 (when shelf is submerged) = 3.55 ft

Option 1	
$d_{av} = V_{perm_pool} / A_{perm_pool}$	
Option 2	
$D_{avg} = \frac{V_{PP} - V_{shelf}}{A_{bottom\ of\ shelf}}$	
Where: D_{avg} = Average depth in feet V_{PP} = Total volume of permanent pool (feet ³) V_{shelf} = Volume over the shelf only (feet ³) $A_{bottom\ of\ shelf}$ = Area of permanent pool (feet ²)	

Required Surface Area (85% TSS):

SA/DA for d_{av} = 3.5 and 70% Impervious = 2.28

SA/DA for d_{av} = 3.5 and 80% Impervious = 2.64

Surface Area to DA Ratio (SA/DA) = 2.30

Req'd Main Pool Surface Area at Perm. Pool = 581 sf

Req'd Total Pond Surface Area at Perm. Pool = Range from 668 sf to 697 sf

(Taken from Chapter C-3 of NCDEQ Stormwater BMP Manual)

Average depth rounded down to nearest 0.5'

Average depth rounded down to nearest 0.5'

THIS IS ONLY THE MAIN POOL SURFACE AREA

This includes minimum 20% forbay surface area

Required Storage Volume (Water Quality):

Design Storm = 1.0 inch

Determine Rv Value = 0.05 + .009 (I) =

0.69 in/in

Design Storm Storage Volume = 1,445 cf

Storage Volume Required = 1,445 cf

Summary of Proposed BMP

Bottom of Pond Elevation = 414.00 ft

Sediment Cleanout Elevation = 415.00 ft

Permanent Pool Elevation = 417.09 ft

Temporary Pool Elevation = 417.94 ft

Top of Berm Elevation = 419.00 ft

Main Pool Surface Area at Permanent Pool = 1,102 sf

(Required Surface Area = 581 sf)

(55.3% of Main Pool Volume)

Forebay Volume (FV1) = 562 cf

(Main Pool Only)

Permanent Pool Volume (PPV) = 1,015 cf

(Required Volume = 1445 cf)

Temporary Pool Volume (TPV) = 1,482 cf

Total Storage Volume (TSV) = 3,713 cf

Total Pond Volume (PV) = 5,299 cf

Proposed Water Quality Volumes

Water Quality Volume -

Wet Detention Pond

Water Quality Volume Required =	1,445
Water Quality Volume Provided =	1,482

- (Bottom of Pond)
- (Bottom of Shelf)
- (Permanent Pool Elevation)
- (Top of Shelf)
- (Temporary Pool Elevation)

¹ Precipitation frequency (PF) estimates in this table are based on frequency analysis of partial duration series (PDS).

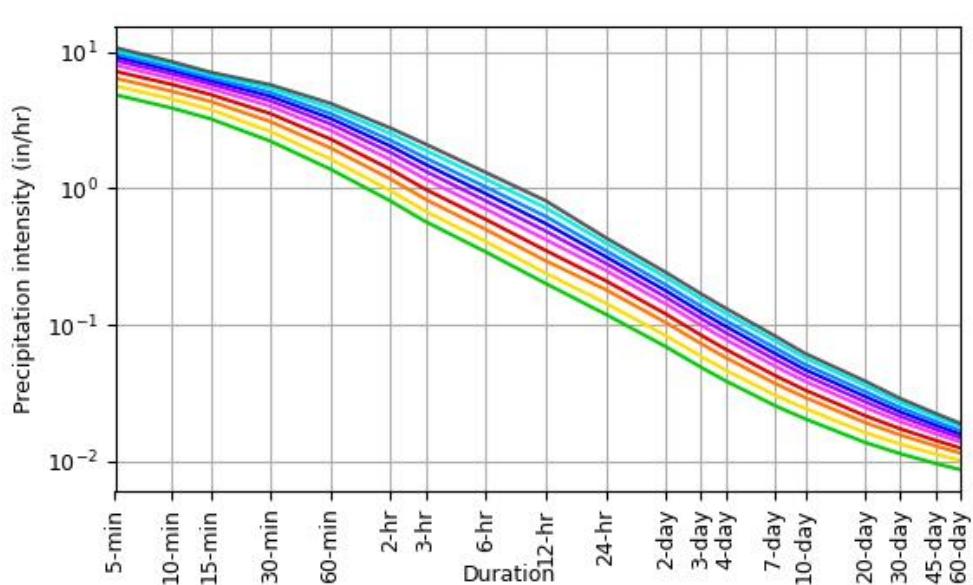

Numbers in parenthesis are PF estimates at lower and upper bounds of the 90% confidence interval. The probability that precipitation frequency estimates (for a given duration and average recurrence interval) will be greater than the upper bound (or less than the lower bound) is 5%. Estimates at upper bounds are not checked against probable maximum precipitation (PMP) estimates and may be higher than currently valid PMP values.

Please refer to NOAA Atlas 14 document for more information.

10-day	4.91 (4.60-5.24)	5.84 (5.48-6.23)	7.04 (6.59-7.50)	7.97 (7.46-8.49)	9.24 (8.62-9.84)	10.2 (9.53-10.9)	11.2 (10.4-12.0)	12.3 (11.4-13.1)	13.7 (12.6-14.6)	14.8 (13.6-15.8)
20-day	6.59 (6.20-7.01)	7.78 (7.32-8.28)	9.21 (8.66-9.80)	10.3 (9.71-11.0)	11.9 (11.1-12.6)	13.1 (12.2-13.9)	14.3 (13.3-15.2)	15.5 (14.4-16.6)	17.2 (15.9-18.4)	18.5 (17.1-19.9)
30-day	8.18 (7.72-8.68)	9.62 (9.08-10.2)	11.2 (10.6-11.9)	12.4 (11.7-13.2)	14.1 (13.2-15.0)	15.3 (14.4-16.3)	16.6 (15.5-17.6)	17.8 (16.6-19.0)	19.5 (18.1-20.8)	20.8 (19.2-22.2)
45-day	10.4 (9.89-11.0)	12.2 (11.6-12.9)	14.0 (13.3-14.8)	15.4 (14.6-16.2)	17.2 (16.2-18.1)	18.5 (17.5-19.6)	19.9 (18.7-21.0)	21.2 (19.9-22.4)	22.9 (21.4-24.3)	24.2 (22.6-25.7)
60-day	12.5 (11.9-13.1)	14.6 (13.9-15.3)	16.5 (15.7-17.4)	18.0 (17.1-19.0)	20.0 (18.9-21.0)	21.4 (20.3-22.5)	22.8 (21.5-24.0)	24.2 (22.8-25.5)	25.9 (24.4-27.4)	27.3 (25.6-28.9)

¹ Precipitation frequency (PF) estimates in this table are based on frequency analysis of partial duration series (PDS).

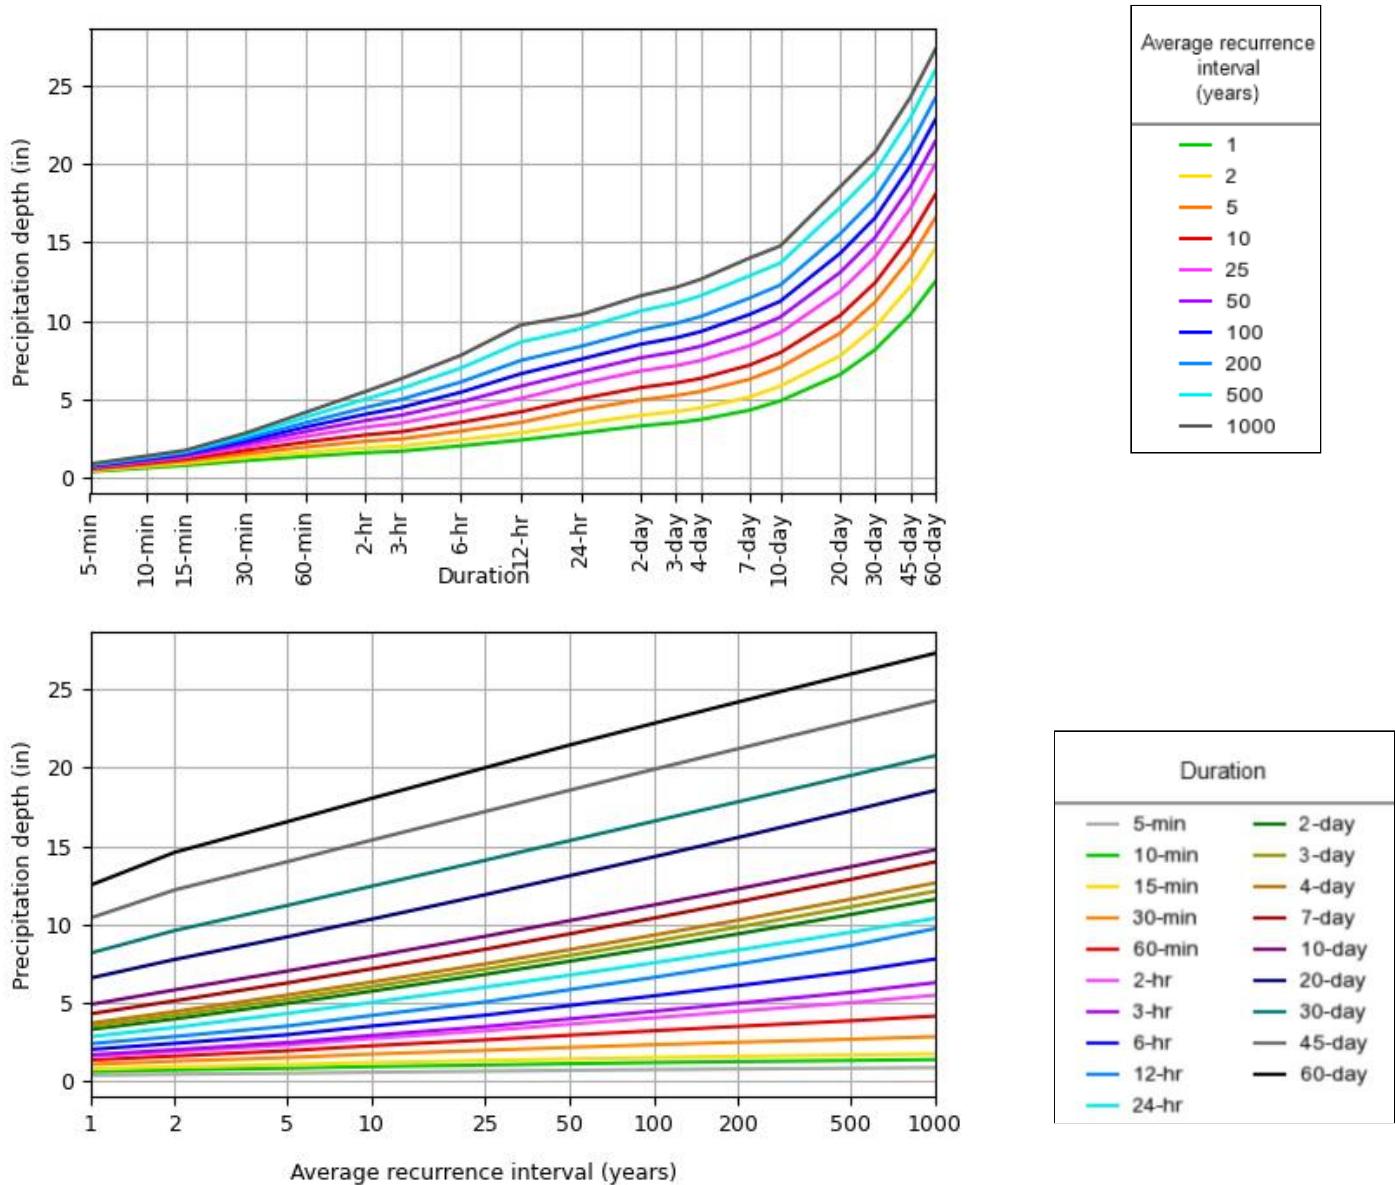

Numbers in parenthesis are PF estimates at lower and upper bounds of the 90% confidence interval. The probability that precipitation frequency estimates (for a given duration and average recurrence interval) will be greater than the upper bound (or less than the lower bound) is 5%. Estimates at upper bounds are not checked against probable maximum precipitation (PMP) estimates and may be higher than currently valid PMP values.

Please refer to NOAA Atlas 14 document for more information.
