THE POINT SOUTH – PKG 3

STORM DRAINAGE SYSTEM CALCULATIONS

GENERAL DESCRIPTION

The Point site is located along NC HWY 401 (Louisburg Road) and west of East Young Street in Rolesville, North Carolina. The proposed development at The Point is approximately 300 acres, divided into two sections with one to the north of NC HWY 401 (The Point – North) and another to the south of NC HWY 401 (The Point - South). This storm drainage analysis includes CD Package 2 of the "The Point – South" only. The total development will consist of approximately 804 lots, a mixture of townhomes and various types of single-family housing, thirteen stormwater control measures, sidewalks, roadways, greenway trail, and associated infrastructure and various amenities.

The Point South – Pkg 3 development is located within the Neuse River basin with the site's stormwater runoff draining into Harris Creek. The proposed development shall be subject to storm drainage requirements set forth in the Rolesville Unified Development Ordinance.

CALCULATION METHODOLOGY

- Rainfall data for the Rolesville, NC region was taken from NOAA Atlas 14. This data describes a depth-duration-frequency (DDF) table describing rainfall depth versus time for varying return periods in the Rolesville, NC area. These rainfall depths are entered into the "Stormwater Studio" application to determine design flows associated with the storm drainage system. Please reference the rainfall data section within this report for additional information.

- The time of concentration was calculated using the Kirpich Method.

- The existing on-site topography used in the analysis is from a field survey by The John R. McAdams Company, Inc. and local GIS data.

- For each individual storm drainage inlet, a drainage area was measured as well as assigning impervious surface percentage. From this impervious percentage, a rational c factor was calculated based on 0.95 for impervious areas. For drainage areas with a combination of both pervious (Open Space and Lawns, C=0.35) and impervious areas, a composite "c" factor was interpolated.

- The pipes were sized using "Stormwater Studio 2021 Ver. 3.0.0.25". This program accepts the input data from each inlet, as well as physical characteristics of the storm system to be designed, and calculates flow rates and pipe sizes throughout the system. The final results of this program as well as calculated pipe sizes and hydraulic grade lines may be found in the appropriate section of this report. The minimum pipe size was 15" unless otherwise shown on the plans. Pipe material is RCP or HDPE as indicated on the plans.

- The inlet types included for this project are primarily NCDOT type combination catch basins with curb inlets and grates. The calculations include an analysis to determine gutter spread at these inlets based on a 4-in per hour rainfall intensity.

- The storm water network was analyzed for the 10-year storm event using a starting time of concentration of 5 minutes.

- The various inlet types are shown on the stormwater detail sheets, within the plan set. Flared end sections or Endwalls are used at discharge points. Headwalls or structures are used at inlet points. Velocity dissipators are provided at discharge points to prevent erosion and scour in these areas. The dissipators have been sized using the NYDOT method.

- For Wall Drains, the pipes were sized using “Studio Express” by “Hydrology Studio Ver. 1.0.0.10”. This program accepts the input data from each inlet, as well as physical characteristics of the storm system to be designed, and calculates flow rates and pipe sizes throughout the system. The final results of this program as well as calculated pipe sizes may be found in the appropriate section of this report. The minimum pipe size was 8” unless otherwise shown on the plans. Pipe material is PVC as indicated on the plans.

[1] Precipitation frequency (PF) estimates in this table are based on frequency analysis of partial duration series (PDS).

Numbers in parenthesis are PF estimates at lower and upper bounds of the 90% confidence interval. The probability that precipitation frequency estimates (for a given duration and average recurrence interval) will be greater than the upper bound (or less than the lower bound) is 5%. Estimates at upper bounds are not checked against probable maximum precipitation (PMP) estimates and may be higher than currently valid PMP values.

Please refer to NOAA Atlas 14 document for more information.

6	Class II	23	36	10 x D(o)	3 x D(o)
7	Special study required				

1. Calculations based on NY DOT method - Pages 8.06.05 through 8.06.06 in NC Erosion Control Manual

2. Outlet velocity based on full-flow velocity

DESIGN OF RIPRAP OUTLET PROTECTION WORKSHEET

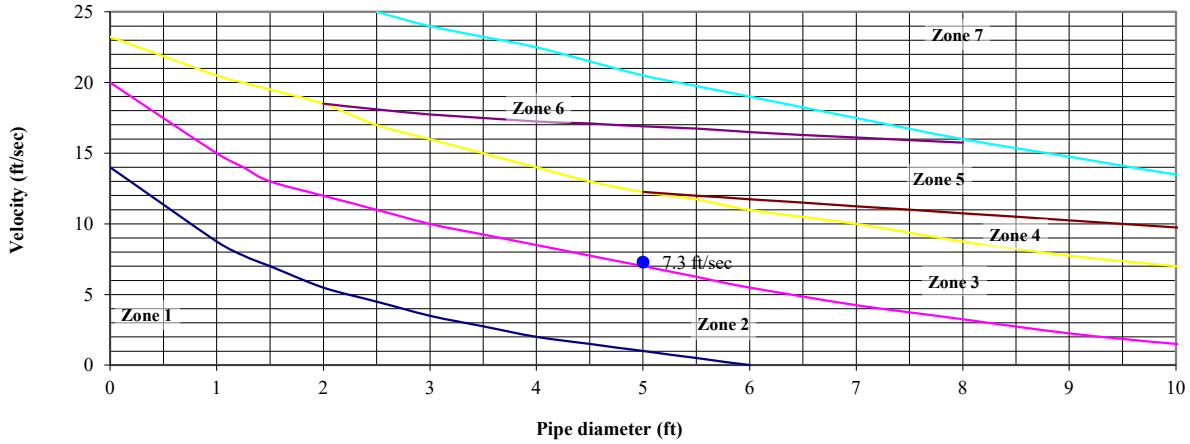
Project:	The Point - CD Package 3	Date:	10/11/2023
Project Number:	AWH-20000	Calculated By:	TD
Outlet Number:	Culvert		

Outlet flowrate =	72.1	cfs
Pipe diameter =	60	inches
Number of pipes =	1	
Pipe separation =	0	feet
Outlet Velocity =	7.3	ft/sec

#7 If this is representing the culvert crossing under Quarry Road, between Phase 5 & 8, the pipe is wrong. Provide associated culvert dissipator pad calculations.

Figure 8.06.b.1



Zone from graph above = 3

Outlet pipe diameter	60 in.	Length =	40.0 ft.
Outlet flowrate	72.1 cfs	Width =	21.0 ft.
Outlet velocity	7.3 ft/sec	Stone diameter =	13 in.
Material =	Class I	Thickness =	24 in.

Zone	Material	Diameter	Thickness	Length	Width
1	Class A	3	12	4 x D(o)	3 x D(o)

Qovertop (cfs)	=	0.00
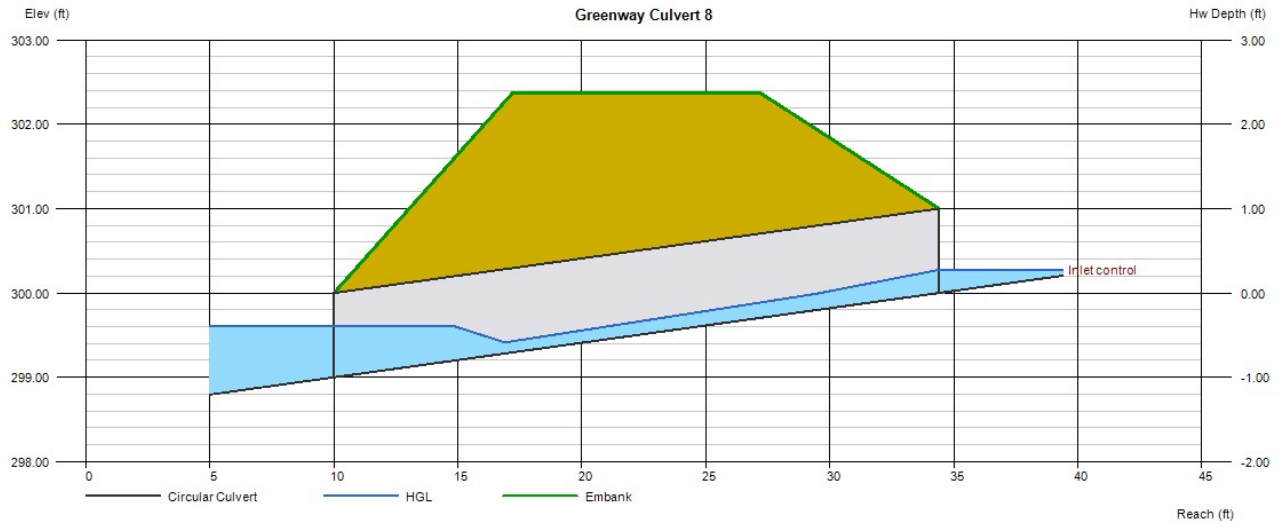
Veloc Dn (ft/s)	=	0.56
Veloc Up (ft/s)	=	2.22
HGL Dn (ft)	=	299.61
HGL Up (ft)	=	300.22
Hw Elev (ft)	=	300.27
Hw/D (ft)	=	0.27
Flow Regime	=	Inlet Control

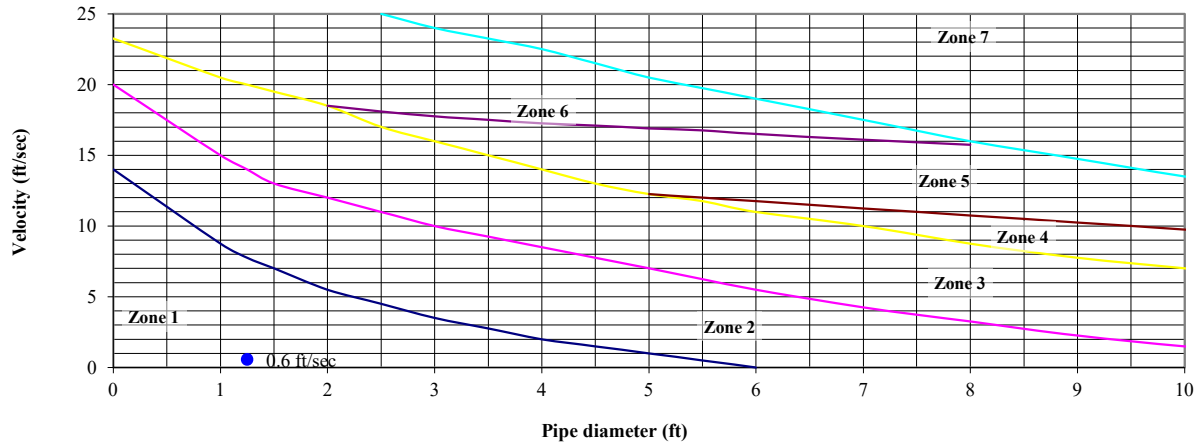


DESIGN OF RIPRAP OUTLET PROTECTION WORKSHEET

Project:	The Point - CD Package 3	Date:	2/27/2024
Project Number:	AWH-20000	Calculated By:	TD
Outlet Number:	Greenway Culvert 8		

Outlet flowrate =	0.28	cfs
Pipe diameter =	15	inches
Number of pipes =	1	
Pipe separation =	0	feet
Outlet Velocity =	0.56	ft/sec

Figure 8.06.b.1



Zone from graph above = 1

Outlet pipe diameter	15 in.	Length =	5.0 ft.
Outlet flowrate	0.3 cfs	Width =	3.3 ft.
Outlet velocity	0.6 ft/sec	Stone diameter =	3 in.
Material =	Class A	Thickness =	12 in.

Zone	Material	Diameter	Thickness	Length	Width
1	Class A	3	12	4 x D(o)	3 x D(o)
2	Class B	6	18	6 x D(o)	3 x D(o)
3	Class I	13	24	8 x D(o)	3 x D(o)
4	Class I	13	24	8 x D(o)	3 x D(o)
5	Class II	23	36	10 x D(o)	3 x D(o)
6	Class II	23	36	10 x D(o)	3 x D(o)
7	Special study required				

1. Calculations based on NY DOT method - Pages 8.06.05 through 8.06.06 in NC Erosion Control Manual

2. Outlet velocity based on full-flow velocity
