M	1.		ion Control and Stormwater Joint Application (Required to initiate processing)	
	2.	Review Fees (Required to initiate processing)  RESUBMITTALS: The first resubmittal is free, but all subsequent Stormwater resubmissions require a \$150  Resubmission Fee and Erosion Control resubmissions require a \$75 Resubmission Fee		
X	3.	Notarized Wake County Financial Responsibility/Ownership Form (Required to initiate processing)		
	×	a.	The application must include the owner's notarized written consent for the applicant to submit an erosion and sedimentation control plan and to conduct the anticipated land-disturbing activity if the applicant is not the owner of the land to be disturbed [10-30-2-(B) - (2)-(c)]	
	4.	Oth	Other documents:	
		a.	Engineering Approval: Copy of approval notification for projects in a municipality's zoning jurisdiction	
X		b.	401/404 Documentation (Buffer determination letters, PCN application, comments, and approval)	
1/8		c.	NCDOT Approval (Temporary Construction Entrances, Encroachment Agreements, etc.)	
2		d.	Encroachment agreement(s) completed, signed and notarized for all off-site construction	

# WMCPR - ROLESVILLE, WENDELL, ZEBULON WATERSHED MANAGEMENT CONSTRUCTION PLAN SUBMITTAL CHECKLIST

	5.	Cover letter stating the purpose of the submission, describing site drainage, stormwater management objectives, and how the proposed stormwater management plan will meet the objectives and be implemented RESUBMITTALS: A letter detailing any changes, comments, proposed solutions to review comments, etc.		
<b>&gt;</b>	6.	Copy of the USGS Quad Map with delineated project limits		
X	7.	Copy of the Wake County Soil Survey map with delineated project limits		
<b>X</b>	8.	One (1) electronic copy of the Municipal Stormwater Design Tool (click here); submit Excel workbook (Site Data Sheet, Drainage Area Sheets, Site Summary Sheet, BMP Sheets, and BMP Summary sheet)		
X	9.	Drainage Area Maps with stormwater discharge points and Tc flow paths (existing/post construction/post BMP)		
X	10.	2 sets of Stormwater and Erosion Control Calculations:		
	25	a.	Sediment basin design (See <u>website</u> for Wake County design criteria)	
	×	b.	Ditches, swales, and channels: Q10/V10. Tractive force (shear stress), capacity and geometry.	
	<b>12</b> 00	c.	Dissipaters: Q10 velocities, stone size and dimensions.	
	<b>S</b>	d.	Velocity calculations for stormwater runoff at points of discharge resulting from a 10-year storm after development were not provided or do not comply	
	SEP	e.	Support data for all stormwater practice designs, such as inflow/outflow rates, stage/storage data, hydrographs, outlet designs, infiltration rates, water elevations, design output, summary, etc.	
	<u>P</u>	f.	Other hydraulic and hydrologic computations critical to the plan/designs	
	Z	g.	Signature, Date And Professional Seal: for all Stormwater design management proposals, i.e. calculations, BMP designs, operations/maintenance/budget/asbuilt/inspections/manuals.	
X	11.	Two	(2) copies of a complete set of construction drawings for 1st submission, five (5) copies for approval	
Ø	12.	Draf	t Stormwater Agreement, Draft Maintenance Agreement	
13	13.	Proposed Site Plan:		
7-	X	a.	Combined Erosion Control, Stormwater and Floodplain Approval Block (Cover Sheet)	
	Ø	b.	Location/Vicinity Map	
	M	c.	North arrow, graphic scale, drafting version date, legend and professional seal	
	X	d.	Existing and proposed contours: plan and profiles for roadways	
	Ø	e.	Boundaries of tract: including project limits	
	D	f.	Table with impervious calculations - existing and proposed impervious surfaces: roads, well lots, recreation sites, single family residences, etc. (consistent with the Municipal Stormwater Design Tool inputs)	
	×	g.	Proposed improvements: roads, buildings, parking areas, grassed, landscaped, and natural areas.	
	Ø	h.	Lot lines, lot numbers, road names, and impervious limit on each lot rounded to nearest whole number	
4	1.16			

### WMCPR - ROLESVILLE, WENDELL, ZEBULON WATERSHED MANAGEMENT CONSTRUCTION PLAN SUBMITTAL CHECKLIST

Q=00			
	<b>P</b>	i.	Utilities: community water and sewer, plan/profiles, easements and sediment controls.
	1	j.	Stormwater Network: inlets, culverts, swales, ditches, channels and drainage easements.
	Ĭ\$P	k.	TEMPORARY SEDIMENT CONTROLS: locations and dimensions of gravel entrances, diversion ditches, silt fence, sediment basins, inlet protection, etc.
	X	l.	Sediment Basin Dewatering Bags: Provide a dewatering bag and location pad adjacent to all sediment basins for maintenance and closeout. Label the bag and pad with dimensions.
46		m.	Stream Culvert Construction Phasing: Provide a detailed construction sequence for installation of culverts at streams and show the stream crossing(s) on the erosion control plan sheets. Include all applicable details related to managing the stream flow during the culvert installation (silt bags, pumparound, impervious dikes, etc.).
4/0		n.	Stream Protection: Design temporary sediment storage during the construction phase of stream culvert installation on all four-corners of the stream crossing (where applicable) and show on the erosion control plan sheets. Provide erosion control blankets on all permanent slopes of culvert at stream crossing.
	M	ο.	PERMANENT EROSION CONTROLS: locations and dimensions of dissipaters, ditch linings, armoring, level spreaders, retaining walls, etc.
	X	p.	Location and requirements for stockpiles (see website for Stockpile Requirements)
	X	q.	Wake County Construction Details
	X	r.	Wake County Construction Sequence (Provide project specific details as needed)
	XO	5.	Wake County Stabilization Guidelines
	<b>X</b>	t.	Wake County Basin Removal Sequence Wake County must grant permission to convert the sediment basin over to stormwater use prior to completing any related work (construction sequence or note elsewhere on the plan should indicate this).
4		u.	Show all Riparian Buffers [Article 9-21]; (Neuse: [15A NCAC 02B.0233 & 0242]
M		v.	Delineation of current FEMA boundaries (floodway, flood fringe & future/0.2%)
S		w.	Proposed stormwater easements, access lanes, and backwater easements
10		x.	A note should be added to the recorded plat distinguishing areas of disconnected impervious
	¥	y.	Location and type of all proposed stormwater management structures (grass swale, wet/dry detention basin, filtering/infiltration basin, bioretention, etc.)
		z.	RESIDENTIAL ONLY Perpetuity statement Impervious surface coverage shall not exceed impervious shown on the lot. Impervious surface limits will be strictly enforced into perpetuity.

Standards and Requirements	
Ordinance references are shown in brackets.	

### WMCPR – ROLESVILLE, WENDELL, ZEBULON WATERSHED MANAGEMENT CONSTRUCTION PLAN SUBMITTAL CHECKLIST

Stor	Stormwater Management Requirements			
	17.	Stormwater Review Required — All residential subdivision development must submit a plan to comply with the applicable municipalities' stormwater ordinance. Office, institutional, commercial or industrial development that <u>disturbs</u> greater than 20,000 square feet is required to comply with the stormwater management regulations. Development and redevelopment that disturb less than 20,000 square feet are not exempt if such activities are part of a larger common plan of development or sale, even though multiple, separate or distinct activities take place at different times on different schedules.  Rolesville [1.2.1.(E)], Wendell [6.5(F)], Zebulon [151.05]		
X	18.	Stormwater Permit – is required for all development and redevelopment unless exempt pursuant to the Code of Ordinances. A permit may only be issued subsequent to a properly submitted, reviewed and approved stormwater management plan and permit application.  Rolesville [1.2.3.(B)(2)], Wendell [6.5(F)(3)], Zebulon [151.21(A)]  Note: A permit may not be required if there are no post-construction requirements (i.e. SCMs).		
A	19.	SCMs – For projects requiring stormwater treatment for quality and/or quantity control, the applicant must  1) comply with the NC Stormwater Design Manual Rolesville [1.2.4.(B)(2)], Wendell [6.5(N)(2)], Zebulon [151.07]  2) as well as Completion of Improvements and Maintenance, prior to issuance of a certificate of compliance or occupancy. Rolesville [1.2.5], Wendell [6.5(O)], Zebulon [151.50 – 151.56]		
	20.	Density (15% or less Built-Upon Area, referred to as BUA, and less than one dwelling unit per acre), Low-Density (more than 15% BUA and no more than 24% BUA), and High-Density (24% or more BUA).  Rolesville [7.5.4], Wendell [ 6.5(E)], Zebulon [151.10]		
		<ul> <li>Standards for Ultra-Low and Low-Density Projects:         <ul> <li>Use of vegetated conveyances to maximum extent practicable</li> <li>Location of development and redevelopment outside Riparian Buffer and Flood Protection Zones</li> <li>Recorded deed restrictions or protective covenants to ensure future development maintains consistency with approved project plans</li> <li>Permanent SCMs (Stormwater Control Measures) are to be designed in accordance with and as specified in the North Carolina Department of Environmental Quality's Design Manual.</li> <li>For Low-Density only, no net increase in peak flow leaving the site from the pre- development conditions for the 1 yr-24hr storm. Runoff volume drawdown time shall be a minimum of 48 hours, but not more than 120 hours.</li> <li>Residential runoff after development must not exceed the Target Curve Numbers listed in the chart "Maximum Composite Curve Number, by Soil Group".</li> <li>Ultra-Low and Low-Density projects may be eligible for target curve number credits.</li> </ul> </li> <li>Wendell Only: Nitrogen export limited to 3.6 pounds per acre per year unless project achieves classification as an LID Project.</li> <li>Rolesville [1.2.4(A)(1-3)], Wendell [6.5(M)(1)], Zebulon [151.35(A-C)]</li> </ul>

410	a. Uncovered areas in High Quality Water (HQW) zones must be limited at any time to a maximum total area of 20 acres within the boundaries of the tract.			
48		b.	<b>Maximum Peak Rate of Runoff</b> - Erosion and sedimentation control measures, structures, and devices within HQW zones must be planned, designed and constructed to provide protection from the runoff of the <b>25-year</b> storm.	
+10	Settling Efficiency - Sediment basins within HQW zones must be designed and constructed so that the basin will have a settling efficiency of at least 70% for the 40 micron (0.04mm) size soil particle transported into the basin by the runoff of that 2-year storm which produces the maximum peak rate of runoff.			
steeper than 2 horizontal to 1 vertical if a vegetative cover is used for stabilizat permit a steeper slope or where the slopes are stabilized by using mechanical controls.		<b>Grade</b> - The angle for side slopes must be sufficient to restrain accelerated erosion (side slopes no steeper than 2 horizontal to 1 vertical if a vegetative cover is used for stabilization unless soil conditions permit a steeper slope or where the slopes are stabilized by using mechanical devices, structural devices or other acceptable ditch liners)		
			ate Bill 1020; "SECTION 3.(h) Additional standards for land-disturbing activities in the water supply ershed":	
		a.	Erosion and sedimentation control measures, structures, and devices shall be planned, designed, and constructed to provide protection from the runoff of the 25-year storm	
		b.	Sediment basins shall be planned, designed, and constructed so that the basin will have a settling efficiency of at least seventy percent (70%) for the 40-micron size soil particle transported into the basin by the runoff of the two-year storm that produces the maximum peak rate of runoff	
		c.	Newly constructed open channels shall be planned, designed, and constructed with side slopes no steeper than two horizontal to one vertical if a vegetative cover is used for stabilization unless soil conditions permit steeper slopes or where the slopes are stabilized by using mechanical devices, structural devices, or other acceptable ditch liners.	
Ne	use Rip	arian	Buffer Rules	
	26.
