#### Plan Date/Revision Date: 04/01/2025

Review Status:		Construction Plan Not Approved and Incomplete (Items 1-4 required to be a complete submittal)
04/14/2025	$\boxtimes$	Construction Plan Not Approved and requires additional information

Construction Plan Review Comments							
Item	Items marked with an "X" were noted as either insufficient or not provided. Engineer comments are in <b>RED</b> and provide the						
nece	essary	requirements for construction plan approval.					
Refe	erence	s for Erosion and Sediment Control: Wake County Unified Development Ordinance (UDO) Article 10					
Refe	erences	s for Stormwater Management are as follows:					
ROL	ESVILL	E: Town of Rolesville Land Development Ordinance <u>Appendix B: Flood Damage Prevention and Stormwater</u>					
Mar	nagem	<u>ent, Section 1.2 Stormwater Management</u> effective June 1, 2021.					
WEI	WENDELL: Town of Wendell Unified Development Ordinance (UDO) <u>Chapter 6: Environmental Protection, adopted 7/26/10</u> .						
ZEB	<b>ZEBULON</b> : Town of Zebulon, NC Code of Ordinances: <u>Chapter 151</u>						
	1.	Erosion Control and Stormwater Joint Application (Required to initiate processing)					
Review Fees (Required to initiate processing)							
<b>2</b> .		RESUBMITTALS: The first resubmittal is free, but all subsequent Stormwater resubmissions require a \$150					
		Resubmission Fee and Erosion Control resubmissions require a \$75 Resubmission Fee.					
	3.	Notarized Wake County Financial Responsibility/Ownership Form (Required to initiate processing)					

		a.	The application must include the owner's notarized written consent for the applicant to submit an erosion and sedimentation control plan and to conduct the anticipated land-disturbing activity if the applicant is not the owner of the land to be disturbed [10-30-2-(B)-(2)-(c)]	
	4.	Other documents:		
		a. Engineering Approval: Copy of approval notification for projects in a municipality's zoning jurisdiction		
		b.	401/404 Documentation (Buffer determination letters, PCN application, comments, and approval) Documentation of wetland delineations.	
		c.	NCDOT Approval (Temporary Construction Entrances, Encroachment Agreements)	
		d.	Encroachment agreement(s) completed, signed and notarized for all off-site construction	
	5.	Cover letter stating the purpose of the submission, describing site drainage, stormwater management objectives, and how the proposed stormwater management plan will meet the objectives and be implemented RESUBMITTALS: A letter detailing any changes, comments, proposed solutions to review comments, etc. No response letter was submitted on 4/3/25 submittal. Please provide for next submittal.		
	6.	Сору	of the USGS Quad Map with delineated project limits	
	7.	Сору	of the Wake County Soil Survey map with delineated project limits from 1970 manuscript	
$\boxtimes$	8.		1) electronic copy of a complete set of construction drawings for 1st resubmission, number (#) copies for approval.	
	9.	One (1) electronic copy of the Municipal Stormwater Design Tool ( <u>click here</u> ); submit Excel workbook (Site Data Sheet, Drainage Area Sheets, Site Summary Sheet, BMP Sheets, and BMP Summary sheet)		
	10.	Drainage Area Maps with stormwater discharge points and Tc flow paths (existing/post construction/post BMP)		
	11.	Drainage Area Map showing drainage areas to erosion control devices (can delineate on plan sheets)		
	12.	Stormwater and Erosion Control Calculations:		
		a.	Sediment basin design (See website for Wake County Design Criteria)	
		b.	Ditches, swales, and channels: Q10/V10. Tractive force (shear stress), capacity and geometry	
		c.	Dissipaters: Q10 velocities, stone size and dimensions	
		d.	Velocity calculations for stormwater runoff at points of discharge resulting from a 10-year storm after development were not provided or do not comply	
		e.	Support data for all stormwater practice designs, such as inflow/outflow rates, stage/storage data, hydrographs, outlet designs, infiltration rates, water elevations, design output, summary, etc.	
		f.	Other hydraulic and hydrologic computations critical to the plan/designs	
		g.	Signature, Date and Professional Seal: for all Stormwater design management proposals, i.e., calculations, BMP designs, operations/maintenance/budget/as built/inspections/manuals	
	13.	Draft Stormwater Agreement and draft Maintenance Agreement		

$\square$	14.	Proposed Site Plan:		
		a. Combined Erosion Control, Stormwater and Floodplain Approval Block (Cover Sheet)		
		b. Location/Vicinity Map		
	$\boxtimes$	c.	North arrow, graphic scale, drafting version date, legend and professional seal. Please include legend on erosion control plan sheets.	
		d.	Existing and proposed contours: plan and profiles for roadways -Proposed contours shown outside silt fence.	
	$\boxtimes$	e.	Boundaries of tract: including project limits -Show boundaries of adjoining permits LOD to make sure there is no overlapping LOD.	
		f.	Table with impervious calculations - existing and proposed impervious surfaces: roads, well lots, recreation sites, single family residences, etc. (consistent with the Municipal Stormwater Design Tool inputs)	
		g.	Proposed improvements: roads, buildings, parking areas, grassed, landscaped and natural areas	
		h.	Lot lines, lot numbers, road names, and impervious limit on each lot rounded to nearest whole number	
		i.	Utilities: community water and sewer, plan/profiles, easements and sediment controls	
	$\boxtimes$	j.	Stormwater Network: inlets, culverts, swales, ditches, channels and drainage easements -Show stormwater network for permanent stabilization. Skimmer cannot be left indefinitely. Please show permit close out conditions.	
	$\boxtimes$	k.	TEMPORARY SEDIMENT CONTROLS: locations and dimensions of gravel entrances, diversion ditches, silt fence, sediment basins, inlet protection, etc. -Show contours for level pad for silt bag. -Provide matting for slopes above creek. -Provide silt fence outlets.	
	$\boxtimes$	I.	Sediment Basin Dewatering Bags: Provide a dewatering bag and location pad adjacent to all sediment basins for maintenance and closeout. Label the bag and pad with dimensions. Please provide a dewatering bag on the erosion control plan. Was present on previous submittal.	
		m.	Stream Culvert Construction Phasing: Provide a detailed construction sequence for installation of culverts at streams and show the stream crossing(s) on the erosion control plan sheets. Include all applicable details related to managing the stream flow during the culvert installation (silt bags, pumparound, impervious dikes, etc.).	

	n.	Stream Protection: Design temporary sediment storage during the construction phase of stream culvert installation on all four-corners of the stream crossing (where applicable) and show on the erosion control plan sheets. Provide erosion control blankets on all permanent slopes of culvert at stream crossing.	
	0.	PERMANENT EROSION CONTROLS: locations and dimensions of dissipaters, ditch linings, armoring, level spreaders, retaining walls, etc.	
	р.	DETAILED COMMENTS REGARDING PERMANENT SEDIMENT CONTROLS:	
	q.	Location and requirements for stockpiles (see website for <u>Stockpile Requirements</u> ) Unsure if this is a stockpile. Please label and include line type on legend. If this is a stockpile, please relocate silt fence 25ft from stockpile limits (based on Wake County design criteria in link above).	
	r.	Wake County Construction Sequence (Provide project specific details as needed)	
	s.	Wake County Construction Details	
	t.	Wake County Stabilization Guidelines	
	u.	Wake County Basin Removal Sequence Wake County must grant permission to convert the sediment basin over to stormwater use prior to completing any related work (construction sequence or note elsewhere on the plan should indicate this).	
	ν.	Show all Riparian Buffers (Neuse: [15A NCAC 2B .0714])	
	w.	Delineation of current FEMA boundaries (floodway, non-encroachment areas, flood fringe and future/0.2%)	
	x.	PERMANENT STORMWATER MANAGEMENT STRUCTURES: locations and types of all proposed stormwater management structures (grass swale, wet/dry detention basin, filtering/infiltration basin, bioretention, etc.)	
	y.	DETAILED COMMENTS REGARDING PERMANENT STORMWATER MANAGEMENT:	
	z.	Proposed stormwater easements, access lanes and backwater easements. Provide and label minimum 20 ft. Access easement and 10 ft. Maintenance easement from toe of stormwater pond embankment.	
Standards and Requirements			
Items marked with an "X" note relevant standards to be applied to the proposed development. Notes in RED provide review			
comments and/or any required elements to comply with standard.			
Ordinance references are shown in brackets.			

	-			
	15.	Stormwater Review Required – All residential subdivision development must submit a plan to comply with the applicable municipalities' stormwater ordinance. Office, institutional, commercial or industrial development that <u>disturbs</u> greater than 20,000 square feet is required to comply with the stormwater management regulations. Development and redevelopment that disturb less than 20,000 square feet are not exempt if such activities are part of a larger common plan of development or sale, even though multiple, separate or distinct activities take place at different times on different schedules. Rolesville [1.2.1.(E)], Wendell [ 6.5(F)], Zebulon [151.05]		
		<b>Stormwater Permit</b> – is required for all development and redevelopment unless exempt pursuant to the Code of		
		Ordinances. A permit may only be issued subsequent to a properly submitted, reviewed and approved stormwater		
$\square$	16.	management plan and permit application.		
		Rolesville [1.2.3.(B)(2)], Wendell [6.5(F)(3)], Zebulon [151.21(A)]		
		Note: A permit may not be required if there are no post-construction requirements (i.e. SCMs).		
		SCMs – For projects requiring stormwater treatment for quality and/or quantity control, the applicant must		
$\boxtimes$	17.	1) comply with the <u>NC Stormwater Design Manual</u> <b>Rolesville</b> [1.2.4.(B)(2)], <b>Wendell</b> [6.5(N)(2)], <b>Zebulon</b> [151.07]		
		2) as well as <i>Completion of Improvements and Maintenance</i> , prior to issuance of a certificate of compliance or		
		occupancy. Rolesville [1.2.5], Wendell [6.5(O)], Zebulon [151.50 – 151.56]		
		Standards Based on Project Density – In accordance with the definitions, projects are identified as Ultra Low-		
	18.	Density (15% or less Built-Upon Area, referred to as BUA, and less than one dwelling unit per acre), Low-Density		
		(more than 15% BUA and no more than 24% BUA), and High-Density (24% or more BUA). Rolesville [7.5.4], Wendell [ 6.5(E)], Zebulon [151.10]		
		Standards for Ultra-Low and Low-Density Projects:		
		Use of vegetated conveyances to maximum extent practicable		
		<ul> <li>Location of development and redevelopment outside Riparian Buffer and Flood Protection Zones</li> </ul>		
		<ul> <li>Recorded deed restrictions or protective covenants to ensure future development maintains</li> </ul>		
		consistency with approved project plans		
		<ul> <li>Permanent SCMs (Stormwater Control Measures) are to be designed in accordance with and as</li> </ul>		
		specified in the North Carolina Department of Environmental Quality's Design Manual.		
		• For Low-Density only, no net increase in peak flow leaving the site from the pre- development		
		conditions for the 1 yr-24hr storm. Runoff volume drawdown time shall be a minimum of 48 hours, but		
		not more than 120 hours.		
		Residential runoff after development must not exceed the Target Curve Numbers listed in the chart		
		"Maximum Composite Curve Number, by Soil Group".		
		<ul> <li>Ultra-Low and Low-Density projects may be eligible for target curve number credits.</li> </ul>		
		Wendell Only: Nitrogen export limited to 3.6 pounds per acre per year unless project achieves classification as		
		an LID Project.		
		Rolesville [1.2.4(A)(1-3)], Wendell [6.5(M)(1)], Zebulon [151.35(A-C)]		

		Standards for High-Density Projects:
		• Measures shall control and treat runoff from the first inch of rain. Runoff volume drawdown time shall
		be a minimum of 48 hours, but not more than 120 hours.
		Structural measures shall be designed to have a minimum of 85 % average annual removal for Total
		Suspended Solids (TSS)
		<ul> <li>Permanent SCMs (Stormwater Control Measures) are to be designed in accordance with and as</li> </ul>
		specified in the North Carolina Department of Environmental Quality's Design Manual.
		<ul> <li>No net increase in peak flow leaving the site from the pre -development conditions for the 1 yr-24hr</li> </ul>
		storm. Runoff volume drawdown time shall be a minimum of 48 hours, but not more than 120 hours.
		Location of development and redevelopment outside Riparian Buffer and Flood Protection Zones
		Rolesville [1.2.4(A)(4)], Wendell [6.5(M)(4)], Zebulon [151.35(D)]
		Low Impact Development (LID) Classification:
		<ul> <li>All development or redevelopment may be submitted for LID classification</li> </ul>
		<ul> <li>Development must mimic the pre-developed hydrologic conditions of the site, as defined as "woods in</li> </ul>
		good condition" for the 2-yr, 24 hr storm, within 10%.
		Techniques required to achieve LID classification
		Natural site design
		<ul> <li>Bio-retention systems or on-site infiltration (at least one must be used)</li> </ul>
		At least two other techniques from the list provided in Rolesville [1.2.4.(B)(5)(e)], and Zebulon
		[151.36(E)(5)]
		At least one other technique from the list provided in Wendell [6.5(N)(5)(e)]
	19.	<b>Downstream Impact Analysis</b> – Required analysis using the "10% rule" drainage area evaluation of the 10-year, 24-hour peak flow of the pre/post development to determine if the project will have any impacts on flooding or channel degradation downstream of the project site in accordance with <b>Rolesville</b> [1.2.4.(B)(1)] <b>Wendell</b> [6.5(N)(1)], <b>Zebulon</b> [151.36(A)].
Wał		24-hour peak flow of the pre/post development to determine if the project will have any impacts on flooding or channel degradation downstream of the project site in accordance with <b>Rolesville</b> [1.2.4.(B)(1)] <b>Wendell</b> [6.5(N)(1)], <b>Zebulon</b> [151.36(A)].

		a.	Uncovered areas in High Quality Water (HQW) zones must be limited at any time to a maximum total		
			area of 20 acres within the boundaries of the tract.		
			Maximum Peak Rate of Runoff – Erosion and sedimentation control measures, structures, and devices		
		b.	within HQW zones must be planned, designed and constructed to provide protection from the runoff of		
			the 25-year storm.		
			Settling Efficiency – Sediment basins within HQW zones must be designed and constructed so that the		
		c.	basin will have a settling efficiency of at least 70% for the 40 micron (0.04mm) size soil particle		
		с.	transported into the basin by the runoff of that 2-year storm which produces the maximum peak rate of		
			runoff.		
			Grade – The angle for side slopes must be sufficient to restrain accelerated erosion (side slopes no		
		d.	steeper than two (2) horizontal to one (1) vertical if a vegetative cover is used for stabilization unless soil		
		u.	conditions permit a steeper slope or where the slopes are stabilized by using mechanical devices,		
			structural devices or other acceptable ditch liners)		
	24.	Sena	te Bill 1020; "SECTION 3.(h) Additional standards for land-disturbing activities in the water supply		
	24.	wate	rshed":		
		,	Erosion and sedimentation control measures, structures, and devices shall be planned, designed, and		
		а.	constructed to provide protection from the runoff of the 25-year storm		
			Sediment basins shall be planned, designed, and constructed so that the basin will have a settling		
		b.	efficiency of at least seventy percent (70%) for the 40-micron size soil particle transported into the basin		
			by the runoff of the two-year storm that produces the maximum peak rate of runoff		
			Newly constructed open channels shall be planned, designed, and constructed with side slopes no		
			steeper than two horizontal to one vertical if a vegetative cover is used for stabilization unless soil		
		c.	conditions permit steeper slopes or where the slopes are stabilized by using mechanical devices,		
			structural devices, or other acceptable ditch liners.		
Neu	ıse Rip	arian I	Buffer Rules		
		Due	to the location of this project, it should be noted that a rule to protect and maintain existing buffers along		
		wat	ercourses in the Neuse River Basin became effective on July 22, 1997. The Neuse River Riparian Area		
$\boxtimes$	25	Prot	ection and Maintenance Rule (15A NCAC 2B .0714) applies to all perennial and intermittent streams,		
	25.	lake	s, ponds and estuaries in the Neuse River Basin with forest vegetation on the adjacent land or "riparian		
		area	".		
Nort	th Caro	olina G	eneral Statute § 113A-61 (c) - Right to Appeal the Decision		
$\boxtimes$	26.	The a	pplicant has the right to appeal this decision per North Carolina General Statute § 113A-61 (c).		
Add	itional	Sugge	sted Changes/Comments		
$\square$	27.	All ch	ecked items are required for the erosion and sediment control and stormwater management submittal to		
	27.	Wake	County. Please feel free to contact me if you have any questions regarding these items.
